## Greyhound Q-Fil Syringe Filters

YOUR GLOBAL SCIENCE PARTNER

# Q Range

- Q-Fil Syringe Filters
- Q-Cap Capillary Columns
- Q-Col HPLC Columns
- Gas Purifiers and Filters
- GC Liners, Septa and Ferrules

**Q Fil**

SYRINGE FILTERS BY GREYHOUND  
Certificate of Conformance • Disposable Syringe Filters

Product	Q-Fil Syringe Filter
Part Number	40-100001
Lot Number	SM280616
Filter Material	Hydrophilic Nylon 0.45µm
Housing Material	Polypropylene
Membrane Diameter	25mm
Test	Specifications
Visual Inspection	Absence of External defects
Luer Lock	Female Luer-Lock Inlet, Male Slip Outlet
Bubble Point	29 psi
Burst Pressure	87 psi
Filtration Area	4.08 cm <sup>2</sup>
Holdup Volume	<100µL
Volume Throughput	100mL

This product complies with all Q-Fil Syringe Filter manufacturing specifications and was produced in accordance with ISO 9001 Quality Management System

## Greyhound - Your Global Science Partner

As a trusted name in the supply of chromatography consumables and certified reference standards, Greyhound also offers a comprehensive selection of top quality own brand Capillary columns and HPLC columns. This catalogue contains details of the Q-Fil range of Syringe Filters. Other product catalogues are available on request.

These quality products are backed by the guaranteed reliability and technical support which has become synonymous with the name Greyhound.

Visit our website at: [www.greyhoundchrom.com](http://www.greyhoundchrom.com) for details of our full range of products.

**Welcome to a new era in analyte detection and column performance.**

### Q-Fil Certificate of Conformance

## Greyhound Q-Fil Syringe Filters

Q-Fil Syringe Filters set the new Quality standard for today's laboratory syringe filters. Manufactured from the highest quality medical grade, high density polypropylene. Q-Fil Syringe Filters provide excellent chemical compatibility with acids, alcohols, bases, ethers, glycols, ketones and oils.

Every colour-coded filter is printed with details of the membrane material and its pore size on the outside of the filter and every box is labelled with the batch number making them ideal for traceability, GLPs and validation purposes.

## Why filter your samples for HPLC?

The main source of particle contamination in HPLC columns originate in the sample to be analysed. Therefore, the final preparation step prior to sample injection into the HPLC instrument is to remove any small particulates from the sample by filtration. Removal of the solid materials is very important as they can interfere with the compound of interest and easily clog up the column being used. This will inevitably have a detrimental effect on the performance of the column, i.e. back pressure, peak size, retention time, peak shape. Severe contamination can lead to the column being irreversibly blocked and therefore having to be replaced. Other costs can include instrument downtime, and the loss of valuable samples.

### Sample Types

Samples differ in a variety of ways, they may be heavily loaded with fine or coarse particulates, dissolved in aqueous or organic solvents with varying viscosities. To facilitate the most appropriate sample preparation result, filters should be optimised to match the particular requirements of each kind of sample being injected.

### Standard Samples

A matrix of 5-10mL is the most common sample volume, with low viscosity, low particle contamination and dissolved in either an organic or an aqueous solvent. Greyhound Q-Fil Regenerated Cellulose Syringe Filters are an excellent choice for such samples. Their inert housing manufactured from high density medical grade virgin polypropylene, complete with the integrated Regenerated Cellulose (RC) membrane has a high chemical resistance against the most common HPLC solvents and is very suitable for aqueous samples. Every batch is HPLC-tested for low extractables. Whilst 0.45µm is the most commonly used membrane porosity, the 0.22µm membrane provides improved purity when using capillary columns or HPLC packings with a particle size of 3µm or less

### Demanding Samples

More difficult samples which contain high loads of particulates, high viscosity or unusually high volumes place additional challenges on the user when preparing samples for HPLC analysis. The particles have a tendency to block the filter, high viscosities will decrease the flow rate and high volumes increase the time required to complete the filtration process. These challenges often result in the user applying a greater degree of manual pressure to the process and potentially exceeding the maximum pressure limit of the filter with a subsequent risk of bursting the housing. As a result, the sample will be lost and a potential safety risk can arise if corrosive solvents or harmful chemicals are being filtered. To assist in overcoming these challenges, the use of Q-Fil Syringe Filters with a built in Glass Microfiber pre-filter are recommended. The pre-filter removes the larger particulates from the sample leaving only the smaller particulates to be filtered by the membrane. These filters increase the flow rate through the unit resulting in a higher volume of sample to be filtered and less pressure being required by the user.

### Small Volume Samples

Smaller volume samples are often valuable and require special attention. Any loss of the analyte due to adsorption by the filter membrane or housing or a large dead volume can have a detrimental effect on the analysis. Smaller filters of 13mm and 4mm diameter decrease the dead volume to less than 25µL and 8µL respectively making them ideal for smaller volume samples.

### Summary

Sample filtration is an important factor in ensuring that HPLC analysis is achieved in an efficient and cost effective way. The extensive range of Q-Fil Syringe Filters have been developed to meet the demands of the analyst and the different sample matrices being used and without losing any of the important sample.

## About our Quality Control procedures

- Every batch of filters is manufactured and tested in accordance with strict ISO 9001:2000 quality procedures
- Every individual Q-Fil Syringe Filter is visually inspected to ensure it meets our manufacturing and quality control specifications
- Each batch of filters is tested prior to release for:
  - External Dimensions - Bubble Point - Water Flow Rate - UV Extractables
  - Burst Pressure and compliance - Filter Integrity

## Why use Greyhound Q-Fil Syringe Filters?

- Q-Fil Syringe Filters are manufactured in compliance with ISO 9001:2000 quality procedures
- Every box is supplied with a Certificate of Conformance to guarantee its batch to batch quality and performance
- The unique encapsulating process developed for these filters, forces the sample to pass only through the membrane, thus avoiding the possibility of leaks or contamination
- Available in the most popular sizes, porosities and membrane types
- Excellent resistance to all routinely used HPLC solvents
- Filter housings are manufactured from the highest quality medical grade, high density polypropylene with a maximum operating temperature of 135°C
- Extremely low level of extractables for highly sensitive work
- Luer connections fully comply with ISO 594-1

## Selecting the right Q-Fil Syringe Filter

- Choose the size of filter based on the volume of sample to be filtered
- Choose the filters porosity based on the size of the potential particulates in the sample. It is important to be aware that the finer the porosity of the membrane the greater the pressure will be required to pass the sample through the filter. A sample containing large quantities of particulates is best filtered using a filter with a built-in glass microfiber pre-filter
- Choose the type of membrane based on the solvent being filtered

### 30mm Dia

Designed for the largest sample volumes or solvent filtration  
 Filtration area 5.39cm<sup>2</sup>  
 Maximum filtration volume <200ml  
 Maximum operating pressure 87psi (6.0 bar) at 20°C  
 Sample volume <200ml  
 Holdup volume <200µl

### 25mm Dia

Designed for larger sample volumes or solvent filtration  
 Filtration area 4.08cm<sup>2</sup>  
 Maximum filtration volume >100ml  
 Maximum operating pressure 87psi (6.0 bar) at 20°C  
 Sample volume <100ml  
 Holdup volume <100µl

### 13mm Dia

Suitable for most applications  
 Filtration area 1.09cm<sup>2</sup>  
 Maximum filtration volume >10ml  
 Maximum operating pressure 87psi (6.0 bar) at 20°C  
 Sample volume <10ml  
 Holdup volume <25µl

### 4mm Dia

Suitable for smaller volume applications  
 Filtration area 0.1cm<sup>2</sup>  
 Maximum filtration volume <2ml  
 Maximum operating pressure 75psi (5.0 bar) at 20°C  
 Sample volume <2ml  
 Holdup volume <8µl

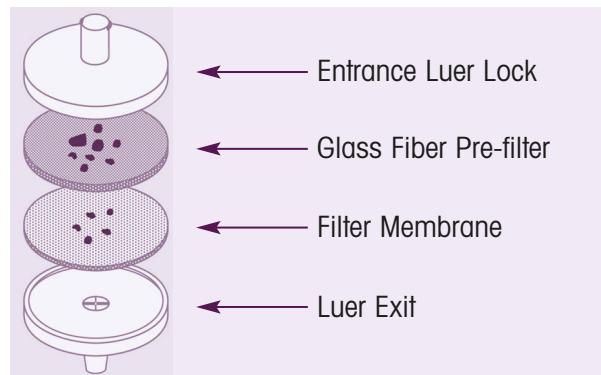

**Pore Sizes**

Q-Fil Syringe Filters are available in 0.22 $\mu\text{m}$  and 0.45 $\mu\text{m}$  pore sizes, (other pore sizes are available on request). The 0.22 $\mu\text{m}$  filters remove the smallest particulates whilst the 0.45 $\mu\text{m}$  filters are designed to remove particulates which would be detrimental to most analytical columns.

Pre-filters have a glass microfiber membrane which is chemically inert and resists most solvents. Q-Fil glass microfiber pre-filters are recommended for removing large particulates from the sample and are ideal for dissolution tests.

### **Q-Fil Syringe Filters with Glass Microfiber Pre-Filter**

- These filters have the same high quality filter membranes and polypropylene housings as our other Q-Fil Syringe Filters, but include a Glass Microfiber (GMF) membrane used as a pre-filter
- The glass microfiber pre-filter is mounted before the microporous filter membrane, eliminating the need for a pre-filtration step, minimising sample loss and prolonging the life of the filter membrane
- Flow rates are increased and the filtrate volume is significantly greater when compared to filters without pre-filters
- Regenerated Cellulose membrane filters with the GMF membrane incorporated as a pre-filter, are particularly useful for tissue culture media filtration, as well as for general biological sample filtration
- These filters are ideal for general laboratory filtration of samples which contain excessive amounts of particulates
- The glass microfiber pre-filter removes the large particulates and prevents premature clogging of the filter membrane

**Syringe Filter Membrane Compatibility Chart**

Use this information to determine the ability of a specific syringe filter membrane to withstand exposure to solvent.  
All concentrations are 100% unless noted.

**NYLON 6**

- Hydrophilic membrane
- Excellent for HPLC samples and general filtration
- Compatible with organic and aqueous liquids
- Good solvent resistance and high protein retention
- Strong mechanical stability
- Maximum operating temperature 100°C

*Not suitable for use with strong acids or bases, halogenated hydrocarbons or protein*

## CELLULOSE ACETATE

- Hydrophilic membrane
- Ideal for aqueous based samples, tissue culture media filtration and sensitive biological samples
- Very low protein binding membrane, lower than PVDF and PES membranes
- Lower chemical resistance than Regenerated Cellulose
- Maximum operating temperature 110°C

*Not suitable for use with organic solvents*

**PTFE (HYDROPHOBIC)**

- Hydrophobic membrane resistant to strong acids, aggressive solvents, alcohols, bases and aromatics
- Ideal for the filtration and degassing of chromatography solvents and for extremely basic mobile phase solutions
- Very low extractables
- Mechanically strong
- Excellent thermal stability
- Maximum operating temperature 100°C

**PVDF (HYDROPHOBIC)**

- Polyvinylidene difluoride membrane, hydrophobic
- Resistant to solvents, exhibits low levels of extractables
- Low protein binding membrane, can be used with proteins and peptides
- Suitable for filtration of aqueous and organic solvents
- Ideal for HPLC and general biological filtration
- Maximum operating temperature 110°C

## PVDF (HYDROPHILIC)

- Modified Polyvinylidene difluoride membrane, hydrophilic
- Resistant to solvents, acids and chemicals
- Very low protein and preservative binding
- Clarification and purification of aqueous and organic solvents, acids and bases
- Filtration of antibiotics, diagnostics, serum, culture media and vaccines
- Maximum operating temperature 110°C

Cat. No.	Description	Colour	Pack

**POLYPROPYLENE**

- Hydrophobic, high resistance to solvents
- Wide range of chemical compatibility to organic solvents
- Ideal for biological sample filtration
- Low protein binding
- Ideal for chromatography protein analysis and biological sample filtration
- Suitable for acids and bases and general HPLC analysis
- Maximum operating temperature 110°C

Cat. No.	Description	Colour	Pack

## POLYETHERSULFONE

- Hydrophilic membrane
- Very low protein and nucleic acid binding
- Provides high flow rates and good throughput volume
- Best choice for tissue culture work
- Very low extractables
- Mechanically strong membrane, suitable for use with strong bases, alcohols and resistive proteins
- Excellent flow rates
- Maximum operating temperature 100°C

Cat. No.	Description	Colour	Pack
40-100340	Polyethersulfone Syringe Filters, 0.22μm, 4mm	Clear	100

40-100050-S	Polyethersulfone Syringe Filters, 0.45μm, 25mm, Sterile	Dark Green	100
40-100055-S	Polyethersulfone Syringe Filters, 0.22μm, 30mm, Sterile	Dark Green	100
40-100054-S	Polyethersulfone Syringe Filters, 0.45μm, 30mm, Sterile	Dark Green	100

**REGENERATED CELLULOSE**

- Hydrophilic, solvent resistant
- Very low protein binding
- Compatible with most common HPLC solvents
- Compatible with aqueous samples in pH range 3 to 12
- Suitable for biological samples and important for protein recuperation
- Best choice for low non-specific binding applications, tissue culture media filtration and biological sample filtration
- Maximum operating temperature 110°C

*Not suitable for use with strong acids, chloroform or THF*

Cat. No.	Description	Colour	Pack

**MIXED CELLULOSE ESTERS (MCE)**

- A mixture of nitrocellulose and cellulose acetate
- Hydrophilic membrane
- Suitable for cleaning or sterilising many aqueous solutions
- Ideal for biological samples or culture media
- Maximum operating temperature 100°C

Cat. No.	Description	Colour	Pack

## ABOUT US

For over 30 years Greyhound Chromatography has been a leading manufacturer and supplier of high quality chromatography consumables and chemicals to laboratories around the world for use in the analysis of Air, Chemicals, Food, Petroleum, Pharmaceuticals, Soil and Water.

Our products are manufactured under appropriate certifications including ISO 9001, ISO 17025 and Guide 34 with an industry leading level of customer service and technical support. Whatever analysis you are carrying out, we can provide you with all the products, chemicals and reference standards required to ensure you achieve top quality results and a more productive laboratory.

Greyhound prides itself on providing the best in personal service, with prompt, efficient, cost effective and safe delivery of all products. With state-of-the-art facilities and highly trained staff, Greyhound provides technical advice on, and distribution of, chromatography consumables and equipment, chemicals and reference standards across all disciplines. Greyhound manufactures its own range of Capillary Columns, Syringe Filters and HPLC Columns, the 'Q' Range, as well as representing the industry's best known manufacturers, including -

3M; Biosolve; Cerilliant; Chiron; Chromacol; Chem Service; EP Scientific; ElKay; ExtraSynthese; Gas Arc; Hach Lange; Hamilton; High Purity Standards; Honeywell; IDEX; Jour Research; PEAK Scientific; Rheodyne; RT Corporation; Samco Scientific; SGE; SGT Filters; Sigma Aldrich/Fluka/Supelco; Swagelok; TCI (Tokyo Chemical Industry); Upchurch; USP (United States Pharmacopoeia); Vici/Valco/Cheminert and Wellington Laboratories.

Our product range includes, Chemical Reference Standards, Chemicals, Ferrules, Filters, Fittings, Gas Standards, GC Columns, Gas Filters, Gas Generators, HPLC Columns, HPLC Column Heaters, HPLC Pumps, HPLC Accessories, Instrument Spares, Laboratory Equipment, Lamps, Pipettes, QuEChERS, Reagents, Septa, Solvents, SPE Columns and Accessories, SPME, Syringe Filters, Syringes, TLC Plates, Tools, Tubing, Valves, Vials/Caps/Seals, WebSeal etc.

Whatever industry you are working in, environmental, clinical, forensic, petrochemical or pharmaceutical we can assist you in working more efficiently, saving analysis time and increasing productivity.

Our sales team is available to discuss your requirements in detail, from the application of products to sourcing and prompt delivery. We are able to source hard to find chemicals which are no longer commercially available and supply over 1 million products via our extensive, global network.

**Our on-line store is available 24/7 and orders can be placed at - [www.greyhoundchrom.com](http://www.greyhoundchrom.com) or by Phone: (+44) (0) 151 649 4000 or Fax: (+44) (0) 151 649 4001.**
